PROFESSIONAL SUMMARY

Computer Science student at DePaul University with leadership experience earned through six years of service in the United States Navy. Experienced in software development, Linux administration, networking, and self hosted infrastructure. Designed and maintained Docker based services including media streaming, photo management, home automation, DNS filtering, and secure remote access solutions. Passionate about building reliable systems and solving technical problems through software and infrastructure engineering.

EDUCATION

DePaul University
B.S. in Computer Science

September, 2023 – November, 2026 (Expected)
Chicago, IL

- **Relevant Coursework:**
 - o CSC 300 and CSC 301 Data Structures and Algorithms
 - o CSC 373 and CSC 374 Computer Systems
 - o SE 350 Object Oriented Software Development
 - o CSC 380 Foundations of AI

SKILLS & RECOGNITIONS

Programming Languages: Java | Python
Operating Systems: Linux | Windows
Tools and Technologies: Docker | Git | Tailscale | Home Assistant | Immich | Pi-Hole
Networking and Infrastructure: TCP/IP | DNS | Network Troubleshooting | Containerization
Navy and Marine Corps Achievement Medal (NAM): 2019 | 2021

PROFESSIONAL WORK EXPERIENCE

United States Navy
Supervisor, Dental Technician, & Hospital Corpsman

March 2015 – September 2021
San Diego, CA

- Supervised and mentored 15 Active Duty and civilian personnel in the daily operations, surpassing the 95% Operational Dental Readiness and directly assisted in the treatment of Active Duty patients in various dental procedures.
- Served as a vital part of the medical team, as a Field Medicine Technician and Hospital Corpsman, providing a wide range of medical and healthcare services to sailors, Marines, and their families.

PROJECT EXPERIENCE

- **Home Lab Infrastructure and Self Hosted Services** November 2024 - Present
 - o Designed and maintained a self hosted home lab environment on Ubuntu Server utilizing Docker containers and Tailscale secure networking.
 - o Deployed and managed multiple containerized services including Plex, Jellyfin, Home Assistant, Acutal Budget, Immich, and Pi-Hole to support media streaming, home automation, personal finance tracking, photo management, and network-wide DNS filtering.
 - o Configured secure remote access, DNS services, storage management, system updates, and backup solutions to ensure reliability and availability.
 - o Performed Linux system administration, network troubleshooting, and infrastructure across a production-like environment.
- **Stock Exchange Simulator** September 2025 – December 2025
 - o Developed a high-performance stock exchange simulator in Java capable of processing large volumes of buy and sell orders.
 - o Implemented price-time priority matching algorithms to execute trades accurately and efficiently.
 - o Optimized data structures and synchronization mechanisms to improve throughput and reduce processing latency.
 - o Generated detailed trade execution reports and transactions histories.
- **Connect 4** April 2024 – June 2024
 - o Developed a Connect 4 game in Java that features a modular software design principles.
 - o Implemented board state management, game logic, and efficient win-detection algorithms.
 - o Applied object-oriented programming concepts including encapsulation, abstraction, and maintainable software architecture.
